[1] Alleen de hoofdriolering is meegenomen in de schatting (Ø > 400 mm)

[2] Het gezamenlijke volume is, vanwege de nauwkeurigheid van de schatting) afgerond op tientallen.

[3] Er is vanuit gegaan dat het riool normaliter voor de helft gevuld is.

[4] De separatoren zijn 100% gevuld.

Tabel 2 Bergend volume oliescheiders (Separators)

Separator	Totaal volume [m³]	Volume separator [m³]	Vullingsgraad	Volume holding bassin [m³]	Pompdebiet [m³/uur]
Separator 1	1477	1452	100%	25	540
Separator 2	882	857	100%	25	300
Separator 3	1695	727	100%	969	-/-
IAF	341				650

Het totale volume van separator 1 bedraagt 1477 m³. Het holding bassin is voorzien van een pomp met een capaciteit van 540 m³ per uur. Het totale volume van separator 2 bedraagt 882 m³. Het holding bassin is voorzien van een pomp met een capaciteit van 300 m³/uur. Indien het gezamenlijke debiet van separator 1 en 2 kleiner is dan 300 m³ per uur wordt het water direct naar de IAF verpompt. Alle debiet groter dan 300 m³ wordt gebufferd in T122 / T124.

Separator 3 is 57 * 17 meter en een normaal level van 0,75. Dit resulteert in een normaal volume van 727 m³. Bij een level van 1,75 meter wordt het water geanalyseerd en gecontroleerd afgelaten naar het oppervlaktewater.

Dit resulteert in een volume van (1,75-0,75)*57*17 = 969 m^3 in het holding bassin. Het holding bassin wordt via een handafsluiter geopend en zal onder vrij verval afstromen in het oppervlaktewater.

Tabel 3 Bergend volume buffertanks

Tank	Totaal volume [m^3]
T122	5.600
T124	10.000
T310	5485

De BIOX kan een maximale stroom van 350 m3/uur aan. Indien de stroom vanuit de Separators groter is wordt deze gebufferd in tanks T122 en T124.

De buffers T122 en T124 worden zo veel mogelijk leeg gehouden om eventuele incidenten op te kunnen vangen. Zodra de aanvoer lager is dan 300 m^3/uur wordt er vanuit de buffers water in de separator 1 gepompt. Dit is niet te modelleren (doordat er op dit moment een cirkel ontstaat) waardoor het risico op het oppervlaktewater overschat wordt.

Verbeteringen worden doorgevoerd door het opvolgen van de gedefinieerde actiepunten.	Ja
Het ontwerp van installaties of onderdelen daarvan is zodanig dat deze intrinsiek veilig zijn (fail-safe design).	Zie HAZOP en P&ID t.a.v. fail safe posities.	Ja
Er wordt een register van de aanwezige stoffen bijgehouden. Voor deze stoffen dienen minimaal de relevante milieugegevens en gegevens omtrent brandbestrijding verzameld en bijgehouden te worden.	Gunvor beschikt over een stoffenlijst met daarin de relevante informatie over binnen de inrichting aanwezige stoffen.	Ja
Er zijn procedures voor het verwerken en/of opslaan van afvalwater, waaronder spills, dat ontstaat bij processtoringen, brand (bluswater), lekkage, verstopping van procesleidingen en/of rioolsystemen. Criterium m.b.t. procedure/activiteit	Toelichting Gunvor	Voldoet aan SVT
Na optreden van een calamiteit moet worden nagegaan hoe de calamiteit heeft kunnen plaatsvinden en moeten maatregelen worden genomen om herhaling te voorkomen.	Gunvor beschikt over een incident database waarin incidenten plus de opvolging ervan zoals root cause analysis en aanbevolen acties beschreven zijn	Ja

Algemene technische voorzieningen

In de volgende tabel is de situatie beschreven, zoals benoemd in de stand der veiligheidstechniek “algemeen technische voorzieningen”. In de tweede kolom is een toelichting van Gunvor bijgevoegd. In de derde kolom is door Bilfinger Tebodin aangegeven of hiermee voldaan wordt aan de SVT.

Tabel 2: Toetsing algemene technische voorzieningen aan de stand der veiligheidstechniek

Voorziening	Toelichting Gunvor	Voldoet aan SVT
Het rioolsysteem binnen de inrichting is zodanig ingericht, bijvoorbeeld door het toepassen van monitoring, dat onvoorziene lozingen niet onopgemerkt plaats kunnen vinden.	Op kritische locaties worden regelmatig samples genomen. Indien een te hoog gehalte aan verontreinigingen wordt gemeten, worden passende acties genomen, bijvoorbeeld bufferen van afvalwater.	Ja
Er is binnen de inrichting een mogelijkheid tot het tijdelijk bergen van stoffen welke als gevolg van een onvoorziene gebeurtenis zijn vrijgekomen.	Ja, slop tanks T-120 en T-610.	Ja
Er zijn speciale voorzieningen voor de afvoer en behandeling van afvalwater dat ontstaat bij spoel-operaties, het opstarten en het al dan niet gepland uit bedrijf nemen voor zover de aard van dit afvalwater significant afwijkt van de reguliere kwaliteit.	Ja, slop tanks. Van hieruit wordt in gepaste dosering het spoelwater naar de afvalwaterzuivering geleid.	Ja
Er zijn op afroep voldoende geschikte blusvoorzieningen beschikbaar.	Er zijn stationaire en mobiele voorzieningen beschikbaar. Gunvor heeft een bedrijfsbrandweer en is lid van de Gezamenlijke Brandweer	Ja

Bij onderdelen van de installatie en of activiteiten met waterbezwaarlijke stoffen is aangegeven op welke wijze eventuele brand bestreden dient te worden.	Een Algemene Beoordelings Methodiek (ABM) toets is uitgevoerd om te bepalen welke waterbezwaarlijke stoffen aanwezig zijn. Bij elk van deze stoffen is in het Material Safety Data Sheet (MSDS) informatie opgenomen over brandbestrijdingsmaatregelen.	Ja

Opslag in tanks (conform [1] opslag in houders)

In deze paragraaf wordt onder opslag in houders het volgende verstaan:
een ruimte specifiek bestemd voor de bewaring van stoffen in (deels) bovengrondse houders, zoals tanks of silo's.

Tabel 3: Toetsing stand der veiligheidstechniek – Opslag in tanks

Beschrijving SVT	Toelichting Gunvor	Voldoet aan SVT
Algemeen		
Het vullen van de tanks vindt slechts plaats na positieve identificatie van de stof.	Ja, vastgelegd in procedures en werkinstructies van afdeling Refinery Coordination	Ja
Het niveau van de stof in de houder wordt bewaakt. Bij afwijkingen vindt alarmering plaats en wordt volgens een vaste procedure ingegrepen.	Alle opslagtanks hebben een niveau-alarmering. Bij hoog niveau zal de operator ingrijpen. Sommige tanks hebben een onafhankelijke overvulbeveiliging.	Ja
De eventueel aanwezige afsluiters van de tankput zijn normaliter gesloten.	Ja, is vastgelegd in voorschrift 33.21 van beschikking PGS-29. Het gesloten houden van de afsluiter voor gecontroleerd afvoeren van water uit de tankput is geborgd in Flexivity, dit is een software communicatie tool voor de Operations afdeling. Afwijkingen op de positie van de afsluiter worden vermeld in het wachtverslag.	Ja
Er is een eenduidige procedure voor het drainen van de tankput.	Tankput afsluiters zijn aanwezig voor elke tankput. Borging in Flexivity systeem	Ja

Overig

De volgende activiteiten in de Stand der Veiligheidstechniek beschreven vinden niet plaats:

- Overslag in eenheden;
- Intern transport;
- Opslag in emballage.

Gunvor verwerkt ruwe olie en olieproducten. De grondstoffen komen per schip of per pijpleiding aan en worden op verschillende locaties op het terrein van Gunvor verwerkt. Transport van product vindt plaats via leidingen en opslag gebeurt in grote tanks die in tankputten staan. Er is geen overslag naar eenheden kleiner dan of gelijk aan IBC's of dergelijken. Intern transport van producten of grondstoffen vindt alleen via leidingen plaats en is daarom niet opgenomen in de SVT tabellen. Er is een heftruck aanwezig die in het geval van zware last wordt gebruikt, maar dit is geen dagelijkse/reguliere bedrijfsactiviteit. Ook is er geen opslag in emballage omdat alle producten en grondstoffen worden opgeslagen in eenheden die veel groter zijn dan de eenheden die vallen onder opslag in emballage (flessen, cans, drums, zakken,bigbags en/of multiboxen).
